

IVORY® SUITE

Expand the Reach of Red Hat to the Mainframe

About Ivory

Ivory offers a suite of industry leading mainframe integration and data access tools that improve operational responsiveness by simplifying and accelerating access to mainframe applications, data and processes.

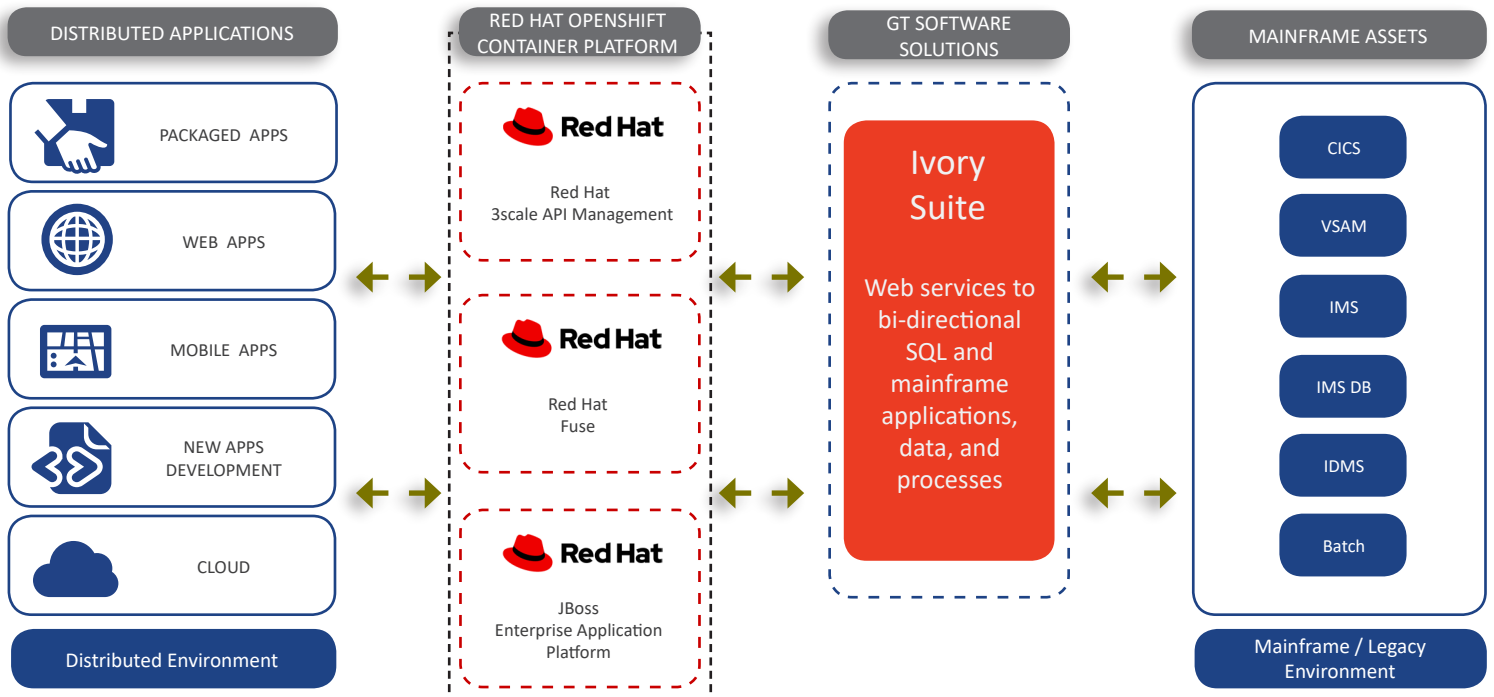

Using Ivory, developers can seamlessly integrate the mainframe with new technologies like mobile banking, Web-based self-service portals, business intelligence, business process management and packaged applications.

GT Software's Ivory Suite

Ivory Service Architect allows customers to extend access to mainframe applications, data and process APIs, without writing or generating additional code, changing existing code and without any additional MIIPIs usage. It creates complex and powerful REST and SOAP APIs through a no-code, drag and drop platform, on average five times faster than other approaches.

Implementing Ivory for mainframe integration requires minimal training and offers instant deployment options. It integrates all mainframe assets—regardless of underlying platforms— in significantly less time and at a dramatically reduced cost than other solutions. GT Software's Ivory allows the mainframe to adapt as quickly as modern platforms, and facilitates agile development on legacy technology.

Expand the Reach of Red Hat Solutions

About GT Software

GT Software turns yesterday's legacy systems into tomorrow's leading edge applications. Its solutions help organizations extend the value of their IT investments through agile development and standards-based APIs, which improves workflow and enhances operational efficiency. Masters of application modernization and a global distributor of the Fujitsu NetCOBOL compiler, GT Software's proven solutions power mainframe integration with today's technologies.

Currently, more than 2,500 organizations globally trust GT Software's solutions to ensure they are able to drive forward innovation that improves customer experiences, increases operational efficiency, and generates revenue.

Expand the Reach of Red Hat to the Mainframe

Service Orchestration is Easy with Ivory

GT Software's Ivory Suite makes service orchestration happen. By constructing easy-to-build APIs, it's possible to seamlessly bring together applications, information and data anywhere it's needed. Ivory also has the fastest time to market than any other mainframe integration solution.

Benefits of Ivory Suite:

- Inbound REST or SOAP-based access to mainframe applications and data
- Create APIs directly from an Open API or WSDL
- Outbound access to APIs from mainframe applications
- Workflows within the mainframe APIs reduce the number of round trips
- Bi-directional Web services
- Superior runtime performance
- Optimal developer productivity
- Specialty engines
- High performance batch and presentation logic integration
- Flexible bottom-up or top-down service design

Components of Ivory

Ivory Studio

An intuitive tool designed for mainframe and distributed developers, Ivory Studio makes assembling mainframe applications and data into APIs easy.

Features:

- Easy to use wizard
- Drag-and-drop capabilities
- No additional coding

Ivory Server

The Ivory Server is the execution for the Ivory Service Architect

Features:

- Easy to use wizard
- Drag-and-drop capabilities
- No additional coding

Server Deployment Options:

- CICS (z/OS or VSE)
- z/OS (zIIP)
- Linux on IBM Z
- Windows/Java
- Linux/Java
- Red Hat Open Shift Container
